

# DC Tableau Consulting Services Enterprise Deployment

Proven methodology designed for accelerating successful deployments in enterprises.

Our Enterprise Deployment package offers four phases of extensive deployment services. Our experienced consultants work with your team to build a solid technical foundation and empower users through best practices and hands-on training. We'll also develop custom management strategies to expand Tableau across your organization and ensure ongoing optimization of the Server platform and Desktop application.

Accelerate your adoption with ease.

Our expert team mitigates the risks of rolling out a new platform. With targeted services that deliver results, we accelerate your adoption and integration. Our consultants know databases, IT environments, and software. We're business people with practical experience solving problems with data and visual analysis in record time.

What's it like to work with us?

From working with Fortune 500 companies, to educational environments, healthcare companies, and growing businesses, our team is experienced. Our deployment methods and consulting services are anchored with best practices we've developed by helping hundreds of customers utilize Tableau right from the start.

We pride ourselves in the positive relationships we foster. Our creativity allows us to develop and implement flexible solutions, specific to your needs.

*"I'm not sure how feasible it would have been without the help of the Professional Services team... it would have taken us a long time to figure out how the different security and authentication options should work."*

Kevin Wyderka, Director of Data Warehouse and Business Intelligence for Cars.com

## Build a Solid Foundation

Optimize your deployment from the start. From planning to deploying, our team is concentrated on your success.

### Phase 1:

- IT Planning
- Architecture and design consulting
- Pre-install checklist
- Install Server
- Tune Server
- Verify installation
- Disaster recovery
- Users, groups and security
- Validate security configuration

### Phase 2:

- Business planning
  - Data mining and discovery
  - Identify patterns
  - Decide on action plan
- Data modeling
- Data extracts
- Data sources
- Business work flow
- Develop-Test-Produce process

## Empower and Ramp

Ensure your users are well-trained and empowered to explore data with Tableau.

### Phase 3:

- Two-day Tableau Fundamentals Classroom Training
- Hands-on advanced coaching with your data
- Build and format visualizations

- Create calculated fields
- Build interactive dashboards
- Publish and share workbooks
- Publishing best practices

## Expand and Utilize

Expand Tableau across your organization with ease. We provide you with a road map for success to ramp internal champions and plan for expansion.

### Phase 4:

- Ramp internal business champions
- Implementation workshops
  - Evaluate action plan
  - Define measurable outcomes
  - Quantify results
